

NEMTAC Certified Training Instructor (CTI)

Ensuring Safety | Promoting Accountability | Enhancing Reliability
Mobility Device and Stretcher Operations Train-the-Trainer

The NEMTAC Mobility Device Securement and Stretcher Operations training course has been developed with both the NEMT company and the entrepreneurial educator in mind. This year's Train-the-Trainer pre-conference program will provide attendees with "first in nation" instructor certification for NEMTAC's two newest course offerings.

Registration for this course is limited to **20 participants** to ensure good knowledge transfer and plenty of practical experience with the props and equipment. The instructor candidates who complete this program will be guided through both courses, demonstrate an understanding of the material, and will have resources for successfully instructing students. Course Guides for skills station set-up, evaluations, and course material will be provided upon successful completion.

Maximize Your Investment

Upon course completion, Certified Instructors will be able to conduct in-house NEMTAC courses for their personnel. Additionally, Certified Instructors will be able to coordinate courses within their local community. As the program grows, there will be additional course delivery opportunities coordinated by Health & Safety Associates in select markets.

The train the trainer course provides individuals with not only the practical instructional design skills, platform techniques and confidence they need, but also with the critical skills to facilitate adult learning and ensure retention. Taking the process a bit further, the NEMTAC trainer certification ensures an individual has demonstrated competency in the essential skills needed to get results in the classroom.

General Information

Pre-Requisite:

All attendees will be required to complete Certified Transport Specialist, Mobility Device Securement and Stretcher Operation Trainings prior to arrival at the pre-conference workshop.
